AboutMe

My interest in web development started in 2021 when I got introduced to Blockchain and becoming a block chain developer and web development was a prerequisite. I started building simple HTML and CSS projects, and building these projects offered engaging challenges to continually improve and learn new skills. It started with a simple “Hello World!” and now it has evolved to a passion and it only gets more exciting from here.

Bellow you will find projects I’ve built that showcase my skills and background in developing software.

EXPERIENCE

Portfolio App

My Portfolio, showcasing my skills and projects, and tools and language I implemented for each project, including a link for the github and live project.

E-commerce Website

A clone of one of my favorite brands. E-commerce website for vintage clothes with the ability to add to shopping cart. This website was constructed with React Js and React Router.

Notes App Location — *Job Title*

A simple note taking app to jotting down notes, with the ability to delete and edit.

Weather Web App (API)

A weather forecast app, showing current weather and the next five days. The app utilizes Weather API and GEO API for the cities data. I also implemented async pagination for a better user experience with city suggestions.

EDUCATION

Azad University, fa, Iran

Sept 2017 - Feb 2018

Business Management

SKILLS

Programming Languages

Javascript | ES6
HTML
CSS

Tools and Libraries

React JS
Git
Sass
Styled Components
Bootstrap
